progress + innovation

It's been another big year for AL13.

Looking back on all of the projects we have been a part of since our inception has been a great source of pride for us this year. It has been amazing to see both the size and quality of AL13 installations consistently on the rise. Throughout it all, we continue to aim to help our customers find easy solutions for the sometimes very complex problems of the ever evolving building industry.

Through the success of our original panel system product, we are very proud to be able to go to market with our next cladding system. Our v-line system brings a powerful new cladding tool to architects, installers and general contractors. We can't wait see to see what you guys do with it.

This booklet showcases technical details and project photography of both systems. The future looks bright and we thank you for taking the time to look through what we feel are two new exciting products in the exterior cladding market space.

Keith Borg

chief operating officer

01. top side cladding Showcased in v-line douglas fir

Our panel system requires no off-site manufacturing. All panels are cut to fit and snap together on site, saving you time and money.

The AL13 panel system is comprised of:

01 Panel

All panels are manufactured using two .020 sheets of aluminum with a PE or Fire Rated core. Panels are supplied with a removable film to protect the finish during transport and installation.

SIZE: 48" x 96" {1220mm x 2440mm}

02 Extrusions

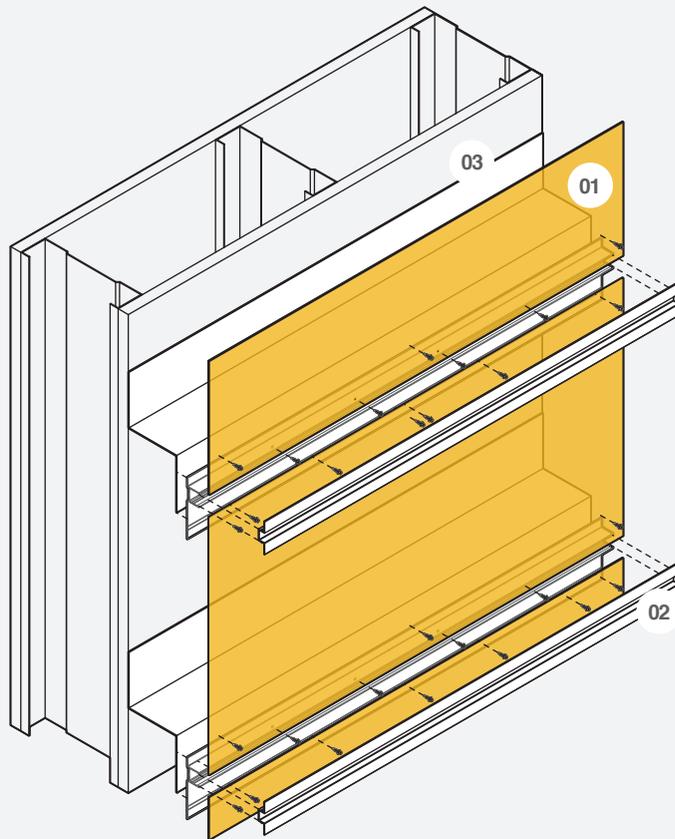

The AL13 system utilizes five different aluminum extruded profiles that are used to create architectural lines while fastening the panels to the substrate.

SIZE: 96" {2440mm} lengths

03 Back-End

Panel spacers position the panels away from the wall, stiffening the panels while creating a pressure equalized rain-screen behind.

SIZE: 96" {2440mm} lengths

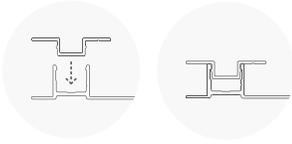

design+ function

The AL13 system differs from other ACM systems in being a tab-over design. The panels are secured by the snap-lock fasteners. Panels are not welded or formed during construction. This allows for each panel to expand and contract across a broad temperature spectrum without causing buckling or oil-canning.

01

02

snap+lock system

AL13 panels are secured to the wall by snap + lock extrusion sets.

Because AL13 has the ability to be changed on the fly, it is a key factor in keeping the building process on time and on budget.

03

the wood is good

In addition to coming in over 40 standard solid and metallic finishes, AL13's panel system also comes in 10 stunning wood grain finishes like dark walnut and brazilian teak.

The PPG finish is applied to the aluminum with a continuous process and baked at a temperature of 600C. The quality of coating is tested in accordance to AAMA 2605 so you know it's a product that can with stand all that mother nature can throw at it for decades to come.

Bring the warmth of wood with all the benefits of metal to your next project.

04

your brand our passion

The products used to represent a brand are significant to the public image and feel of a company. Durable, cost-effective and environmentally sound solutions are specifically chosen by architects, investors and developers when designing properties for corporations. With its durability, weather resistance and sharp design lines, AL13's panel system is a solution that more than meets the mark.

05

tested +
approved

AL13's panel system has a tab-over design that consists of five different aluminum extruded profiles. The panel spacers and extrusions work together to create a pressure equalized rain-screen system, allowing any moisture to exit.

AL13's panel system has been tested and approved for fire safety requirements across North America.

06

we play well with others.

The clean lines created by AL13's panel system allow the product to merge seamlessly with a variety of other materials and glazing options.

07

nationally distributed products

Whether you're renovating a residential home, lining up product for a multi family build or looking to clad a full sized commercial project, we have the product you need when you need it.

AL13 has national distribution, which creates a larger and more competitive installation base while reducing material lead times.

component parts

Our v-line system gives the look of traditional wood siding with all the added structural and durability benefits of metal.

The AL13 v-line system is comprised of:

01 v-line plank

v-line siding & soffit planks are manufactured using 6063 T5 aluminum alloy.

SIZE: 4" x 144" {101.6mm x 3657.6mm}
6" x 144" {152.4mm x 3657.6mm}

02 Extrusions

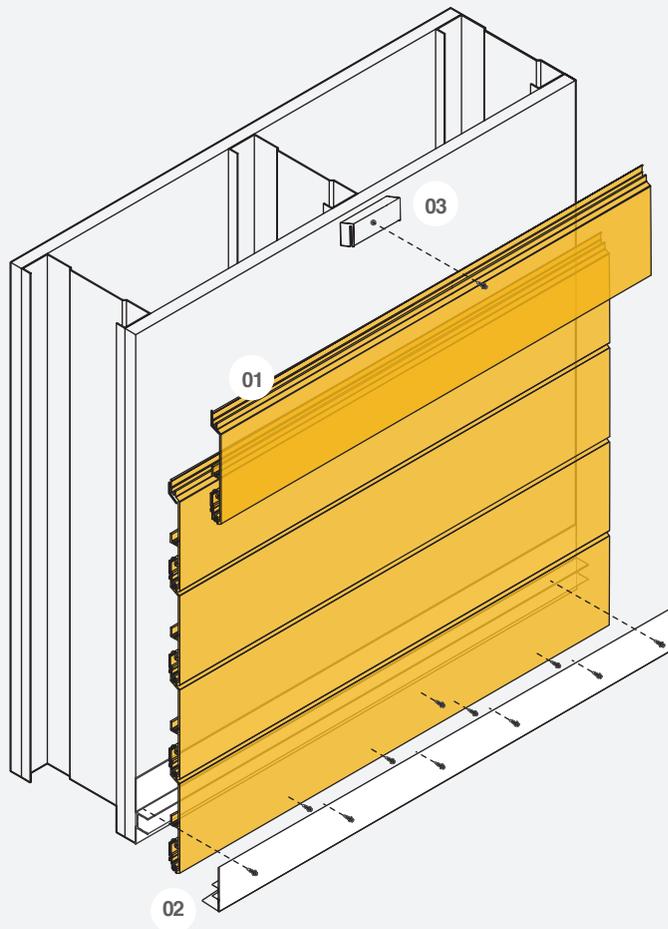

The v-line system utilizes seven different aluminum extruded profiles that are used to create architectural lines while fastening the panels to the substrate.

SIZE: 96" {2440mm} lengths

03 Back-End

System clips are used every 32" to secure the v-line panel to the wall.

SIZE: 4" {101.6mm} lengths

metallic emery

04 soffits done right. ✨

01. soffits Showcased in douglas fir

Looking to add wood soffits to your next project but concerned about durability and longevity of using a wood product?

The v-line system solves this problem as it is made entirely of aluminum and securely fastened to the sub straight. It will never sag, peel or crack like traditional soffit applications of the past.

01. top level cladding showcased with v-line oak finish

05

minimal maintenance + maximum durability

The v-line system is virtually maintenance free and because it is made of aluminum, it can't warp, rot or peel like traditional wood products.

The system is ready for whatever mother nature has in store.

06 v-line commercial applications

V-line is not just great for residential projects but can seamlessly integrate into any commercial project that is looking to add the warm tones of wood. Creating a more inviting exterior through these tones helps bring a sense of peace to an otherwise cold exterior.
